Portable tester

Koslow Scientific has released a portable instrument for passivation testing and validation of stainless steel equipment used in processing and transporting pharmaceuticals and food. The Passi-Flash 3036 resembles an oversized pen, works with all grades of stainless steel and is designed for single-handed operation.

The instrument tests steel's passivity, producing an immediate pass or fail signal and displaying the measurement in millivolts. It features built-in memory to store readings, which can be downloaded to a spreadsheet, data file or other digital document. Stored readings are automatically date and time stamped.

Call: 201-541-9100.
